TITLE OF INVENTION:

AND NUCLEIC ACIDS ENCODING THEM

```
Sequence 10. Application US/09856285

GENERAL INFORMATION:

APPLICANT: 11ag, Leodevico L.

APPLICANT: 10g, Jocelyn, H.

APPLICANT: 10g, Jocelyn, H.

TITLE OF INVENTION: Method for Modifying and Identifying

TITLE OF INVENTION: Functional Sites in Proteins

FILE REFERENCE: 50125/024001

CURRENT APPLICATION NUMBER: US/09/856,285

CURRENT FILING DATE: 2001-05-18

PRIOR APPLICATION NUMBER: PCT/EP99/09052

PRIOR FILING DATE: 1999-11-23

PRIOR APPLICATION NUMBER: DE 19854196.1

PRIOR FILING DATE: 1998-11-24

NUMBER OF SCT IN NOTE: 19854196.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CURRENT APPLICATION NUMBER: US/09/475,541

CAPALYTIC ACTIVITY: Phosphatidylcholine + H(2)0 = 1-
acylglycerophosphocholine + a fatty acid andon.

COPACTOR: Binds I calcium ion per subunit (By similarity).

SUBCELLULAR LOCATION: Secreted (By similarity).

TISSUE SPECIFICITY: Expressed by the venom gland.

SIMILARITY: BELONGS TO THE PHOSPHOLIPASE A2 FAMILY. GROUP 1
